White Label Business Continuity & Disaster Recovery

Nearly 20 percent of businesses will fall prey to disaster at some point. Without a solid Business Continuity Plan in place, those disasters could result in data loss and extended periods of downtime, costing clients and impacting bottom lines. Among those most impacted are the businesses that lack a Business Continuity Plan, with 80 percent of those businesses shutting their doors forever within eighteen months of a disaster.

These harsh statistics underline the importance of having a Business Continuity Plan in place before disaster strikes. AwesomeCloud's suite of services includes white label Business Continuity Solutions that can have a client's businesses up and running before, during, and after a disaster—without a single glitch.

High Availability & One-Hour Recovery

Our Partners Say it Best

AwesomeCloud has been 'awesome' for us. We use them for all of our internal server needs and recommend them as our cloud hosting partner for our customers. The transitions have been a net benefit. They are responsive to our needs. Their up-time and speed are both excellent.
